

**Marsilius-Vorlesung: "Kidney Exchange and other market and near-market approaches to transplantation"**

**Prof. Alvin Roth, Nobelpreis für Ökonomie 2012**

**Stanford University/USA**

Recent advances in the organization of kidney exchange have increased the opportunities for patients to receive live donor kidney transplants even when their own donors are incompatible. But kidneys for transplant remain a scarce resource around the world. I will discuss various ways in which the economics of market design can contribute to easing the shortage, and how it can inform the debate about what to do next.
